DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: coating 34 as mentioned in paragraphs [0037], [0038], and [0043]. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 25 and 28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 25-28 are improper dependent claims that cross different statutory classes of invention. Appropriate correction is required.

Application/Control Number: 10/565,037 Page 3

Art Unit: 3726

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 25 and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Mayzel (US 6,896,970 B2). See column 3, lines 1-11, and figure 2 for further clarification.

Regarding <u>claims 25 and 27</u>, Mayzel discloses a steel sheet/substrate (12) provided with a first coating (13) and a second anti-corrosion coating (18).

Note that claims 25 and 27 appear to be product by process claims, and as such only the structural limitations have been given patentable weight as the end result of the above claims is product and not a method of forming the product.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 10-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' Admitted Prior Art (AAPA) in view of Lips et al. (US 6,524,725 B1).

Regarding <u>claim 10</u>, AAPA at pages 1-2 discloses the production of a press-hardened component from a semi finished product made of unhardened, hot-workable steel sheet and precoated with a first coating, comprising the following method steps: forming a component blank from the semi finished product by cold-forming; trimming the component blank at a margin to a marginal contour approximately corresponding to the component to be produced; heating and press-hardening the trimmed component blank in a hot-forming tool.

Regarding <u>claim 11</u>, AAPA discloses the press-hardened component being a vehicle body component.

Regarding claim 12, AAPA discloses the cold forming including drawing.

Regarding <u>claim 18</u>, AAPA at pages 1-2 discloses the production of a press-hardened component from a semi finished product made of unhardened, hot-workable steel sheet and precoated with a first coating, comprising the following method steps: heating and press-hardening the semi finished product in a hot-forming tool so as to define a component blank; and trimming the component blank at a margin to a marginal contour corresponding to the component to be produced.

Regarding <u>claim 19</u>, AAPA discloses the press hardened component being a vehicle body component.

Regarding <u>claims 26 and 28</u>, AAPA discloses the first coating is aluminum (AISi).

AAPA, however, does not disclose the following: covering the press-hardened component blank with a second, anticorrosion coating; the second coating being applied

to the press-hardened component blank by a hot galvanizing process; the second coating being applied to the press-hardened component blank by a thermal diffusion process; the second coating being deposited on both the first coating and uncoated regions of the component blank uncoated by the first coating; freeing the coated component blank coated by the second coating of residues of the covering step after the covering step; tempering the coated component blank after the covering step; or a press-hardened component comprising the press-hardened component blank and the second, anticorrosion coating, wherein the second, anticorrosion coating includes zinc.

Lips discloses covering a steel component blank with a second, anti corrosion coating (i.e. zinc; col. 3, lines 31-39) by a hot galvanizing process (col. 3, lines 45-46), and the second coating being deposited on both the first coating (i.e. zinc) and inherently upon uncoated regions of the component blank uncoated by the first coating. Lips also discloses heat treating (col. 4, lines 32-40) the anti corrosion coating in a temperature range of 700 to 900 degrees Celsius which would encompass tempering the coated component blank after the covering step. Lips also discloses thermal spraying (which is essentially equivalent to thermal diffusion process when applying a coating) in order to apply the zinc coating to the component blank. Lips discloses the second, anti corrosion coating being zinc, in order to provide a sufficiently corrosion protected layer. See column 3, lines 31-65 and column 4, lines 30-31 for further clarification.

Therefore, it would have been to one having ordinary skill in the art at the time of invention to cover the press-hardened component blank of AAPA with a second, anticorrosion coating wherein the second coating is applied to the press-hardened

component blank by a hot galvanizing process or a thermal diffusion process, and wherein the second coating is deposited on both the first coating and uncoated regions of the component blank uncoated by the first coating, to temper the coated component blank of AAPA after the covering step, and to provide the press-hardened component blank of AAPA with a second, anticorrosion coating including zinc, in light of the teachings of Lips, in order to provide a sufficiently corrosion protected surface for the substrate.

Regarding <u>claims 16 and 23</u>, it is conventional and well to free a coated component blank coated by the second coating of residues of the covering step after the covering step.

Therefore, it would have been obvious to one having ordinary skill in the art at the time of invention to free the coated component blank of AAPA/Lips of residues so as to provide a clean and contaminant free surface for subsequent processing.

Conclusion

- 8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The reference listed on the attached PTO-892 is cited to show corrosion protection for metal substrates.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jermie E. Cozart whose telephone number is 571-272-4528. The examiner can normally be reached on Monday-Thursday, 7:30 am 6:00 pm.

Application/Control Number: 10/565,037 Page 7

Art Unit: 3726

10. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bryant can be reached on 571-272-4526. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

11. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
